# PERIODIC TABLE 2 

## Mark scheme

## Question 1

| Question | Answer | Extra information | Marks |
| :---: | :---: | :---: | :---: |
| (a) | B |  | 1 |
| (b) | e.g. link between Li, $\mathrm{Na}, \mathrm{K},(\mathrm{Rb}$, Cs) <br> or $\mathrm{Mg}, \mathrm{Ca},(\mathrm{Sr}, \mathrm{Ba})$ <br> or $\mathrm{F}, \mathrm{Cl}, \mathrm{Br}, \mathrm{I}$ <br> linked appropriate comment about that link e.g. similar physical / chemical properties or similar specific reactions or same number of outer electrons | allow any two elements in the same group (in both Newlandís and the modern periodic table) <br> if no elements identified, allow 1 mark for a general comment about elements in the same column having similar properties ievery eighth element has similar propertiesî = 1 mark | $1$ |
| (c) | any two from: <br> - no gaps for undiscovered elements or elements still being discovered <br> - some boxes have 2 elements <br> - metals and non-metals in same column / mixed up / some elements in the same column had different properties <br> - pattern for first 16 or so elements only <br> - any sensible suggestion about misplaced elements e.g. copper in group 1 metals |  | 2 |
| (d) | alkanes are not elements or <br> alkanes are compounds | ignore molecule / molecular | 1 |
| Total marks |  |  | 6 |

## Question 2

| Questions | Answers | Extra information | Marks |
| :---: | :---: | :---: | :---: |
| (i) | Mendeleev and Newlands |  | 1 |
| (ii) | atomic weight |  | 1 |
| (iii) | chemical reactions |  | 1 |
| (iv) | electrons |  | 1 |
| Total marks |  |  | 4 |

## Question 3

| Questions | Answers | Extra information | Marks |
| :---: | :---: | :---: | :---: |
| (a)(i) | undiscovered elements |  | 1 |
| (ii) | they would be in the wrong group / have the wrong / different properties / don't fit the pattern | allow atomic weights may have been wrong | 1 |
| (b)(i) | any three from: <br> - elements arranged in proton / atomic number order <br> - group: elements in the same group / column have same number of outer <br> electrons owtte <br> - group: number of shells increase down group <br> - period: elements in the same period / row have the same number of shells / energy levels <br> - period: number of protons / electrons increase across period <br> - atomic number: link of atomic number to number of protons <br> - atomic number gives number of electrons | ignore mass number / atomic weight / neutrons throughout | 3 |
| (ii) | it would mean splitting a proton / electron <br> or implication of splitting proton / electron |  | 1 |

| Total marks |  |  | 6 |
| :---: | :---: | :---: | :---: |

## Question 4

| Questions | Answers | Extra information | Marks |
| :---: | :--- | :---: | :---: |
|  | because the elements are in order <br> of number of electrons or proton <br> number <br> because the number of energy <br> levels / shells is the number of the <br> period <br> because the number of electrons <br> in the outer energy level / shell is <br> the number of the group, except <br> in the case of the noble gases |  | 1 |
| Total marks |  |  | 1 |

## Question 5

| Questions | Answers | Extra information | Marks |  |
| :---: | :--- | :--- | :---: | :---: |
| (a) | similar properties | 1 |  |  |
| (b)(i) | in order of atomic / proton <br> number | in order of atomic / proton number | 1 |  |
| (ii) | elements in same group have <br> same number (of electrons) in <br> outer shell or highest energy <br> level | allow number (of electrons) <br> increases across a period | 1 |  |
| Total marks |  |  |  |  |

Question 6

| Questions | Answers | Extra information | Marks |
| :---: | :---: | :---: | :---: |
|  | protons | must be in correct order | 1 |
| electrons |  | 1 |  |
| Total marks |  |  | 2 |

## Question 7

| Questions | Answers | Extra information | Marks |
| :---: | :---: | :--- | :---: |
| (a) | (iron) is a metal | accept transition element <br> allow (iron) had different <br> properties (to oxygen and sulfur) <br> ignore electrons | 1 |

| (b) | so that elements with similar <br> properties could be placed <br> together | allow to make the pattern fit <br> ignore undiscovered elements | 1 |
| :---: | :--- | :--- | :---: |
| (c) | atomic number(s) | allow proton number(s) | 1 |
| (d) | all have one electron in the <br> outer shell (highest energy level) <br> (so they) have similar properties <br> or <br> react in the same way | allow same number of electrons <br> in the outer shell (highest <br> energy level) <br> allow specific reactions e.g. with <br> water | 1 |
| Total marks |  |  | 5 |

Q8.

| Question | Answer | Marks |  |
| :---: | :--- | :--- | :---: |
|  | A | compounds | 4 |
|  | groups | 2 | 1 |
|  | B | properties | 3 |
|  | C | symbols | 1 |
|  | D |  | 1 |
| Total marks |  |  | 4 |

Q9.

| Question | Answer | Extra information | Marks |
| :---: | :---: | :---: | :---: |
| (a) | 2 |  | 1 |
| (b) | 2 |  | 1 |
| Total marks |  |  | 2 |
