## PERIODIC TABLE 1

## MARK SCHEME

## Question 1

| Question | Answers | Extra information | Mark |
| :---: | :---: | :---: | :---: |
| (a) | number | allow 8 | 1 |
| (a) | 0 |  | 1 |
| (b)(i) | an alkali <br> metal | a <br> transition <br> metal | for <br> undiscove <br> red <br> elements |
| (c) |  | accept so elements with <br> similar properties were in the <br> same groups <br> accept so elements fitted the <br> pattern of properties | 1 |
|  |  |  | 1 |
| Total |  |  | 5 |

## Question 2

| Question | Answers | Extra information | Mark |
| :---: | :---: | :---: | :---: |
| (i) | B |  | 1 |
| (ii) | E |  | 1 |
| (iii) | F |  | 1 |
| (iv) | D |  | 1 |
| (v) | C |  | 1 |
| Total |  |  | 5 |

## Question 3

| Question | Answers | Extra information | Mark |
| :---: | :--- | :--- | :---: |
| (i) | A correct link between <br> any two named <br> elements eg same group <br> l column same <br> properties / number of <br> outer electrons | Allow some link between any two <br> elements in the same group (in both <br> Newlandsí and or the modern periodic <br> table) | 1 |
| (ii) | Any two from: <br> elements still <br> being discovered <br> or no gaps for | Ignore statements about lack of <br> evidence / proof | 2 |

|  | undiscovered elements <br> - some boxes have 2 elements in them <br> - metals and nonmetals in same column / mixed up <br> - pattern for first 16 or so elements only | accept some elements in same column have different properties. allow any sensible suggestion about misplaced elements eg copper in group 1 elements <br> allow did not work for all elements |  |
| :---: | :---: | :---: | :---: |
| Total |  |  | 3 |

## Question 4

| Question | Answers | Extra information | Mark |
| :---: | :---: | :---: | :---: |
| $(\mathrm{a})(\mathrm{i})$ | A |  | 1 |
| $(\mathrm{a})(\mathrm{ii})$ | F |  | 1 |
| (a)(iii) | E |  | 1 |
| (a)(iv) | C |  | 1 |
| (a)(v) | A or B |  | 1 |
| Total |  |  | 5 |

## Question 5

| Question | Answers | Extra information | Mark |
| :---: | :---: | :---: | :---: |
| (a) | Left gaps |  | 1 |
|  | If placed consecutively, then elements would be in wrong group / have wrong properties | Allow some elements didn't fit pattern | 1 |
| (b) | (elements placed in) atomic / proton number order |  | 1 |
|  | (elements in ) same group have same number of outer electrons |  | 1 |
|  | any one from: <br> - number of protons = |  | 1 |

\begin{tabular}{|c|c|c|c|}
\hline \& \begin{tabular}{l}
number of electrons \\
- reactions (chemical) properties depend on the (outer) electrons \\
- number of shells gives the period
\end{tabular} \& allow number of shells increases down the group \& \\
\hline (c)(i) \& \begin{tabular}{l}
(transition elements usually) have same / similar number of outer / 4th shell electrons \\
inner (3rd) shell / energy level is being filled
\end{tabular} \& ignore shells overlap \& 1

1 <br>
\hline (c)(ii) \& 2nd shell / energy level can (only) have maximum of 8 electrons or 2nd shell / energy level cannot have 18 electrons \& \& 1 <br>
\hline Total \& \& \& 8 <br>
\hline
\end{tabular}

## Question 6

| Question | Answers | Extra information | Mark |
| :---: | :---: | :---: | :---: |
| (a)(i) | Element | 1 |  |
| (a)(ii) | atomic <br> weight | atomic <br> (proton) <br> number |  |
| (a)(iii) | transition <br> metals |  | 1 |
| (b)(i) |  |  | 4 |

## Question 7

| Question | Answers | Extra information | Mark |
| :---: | :--- | :--- | :---: |
| (a) | $40(\mathrm{Ca})+137(\mathrm{Ba}) / 2=$ <br> 88.5 | accept a recognition that the average is <br> near 88 or it is the average of the other <br> two <br> accept Sr is midway between Ca and Ba | 1 |
| (b) | E.g. newly discovered <br> elements / atoms didn't | he = Dobereiner | 1 |

|  | fit (into triads) or didn't <br> apply to all elements / <br> atoms or lot of <br> exceptions | lignore Mendeleev left spaces or not <br> enough evidence |  |
| :---: | :--- | :--- | :---: |
| (c)(i) | same number of <br> electrons in outer shell | accept energy level for shell <br> accept a correct reference to a specific <br> group <br> eg (all) have one electron in outer shell <br> (all) lose one electron (when they <br> react) | 1 |
| (c)(ii) | accept energy level for shell <br> accept d-level being filled <br> accept specific reference to 3rd shell <br> accept descriptions in terms of 3d \& 4s <br> etc. | 1 |  |
| eld shell |  |  |  |
| (usually) same number |  |  |  |
| of outer / 4th shell |  |  |  |
| electrons |  |  |  |$\quad 1$| 1 |
| :---: |
| Total |
