1. Here are two spinners, $P$ and $Q$.

Spinner $P$ has 4 equal sections.
Spinner $Q$ has 6 equal sections.

Ben spins the pointer on each spinner.

For each statement below, put a tick $(\checkmark)$ if it is correct.
Put a cross ( $\boldsymbol{X}$ ) if it is not correct.

Ben is more likely to score 4 on spinner P than on spinner Q .

The score on spinner $P$ is certain to be less than the score on spinner Q . $\square$

Ben is equally likely to score an even number on spinner P and spinner Q .

A score of less than 3 is equally likely on spinner P and spinner Q .
2. Here are two spinners, $A$ and $B$.

A

B

Hassan spins the pointer on each spinner.
He adds his two scores together.
For each statement put a tick $(\checkmark)$ to show if it is certain, possible or impossible.
One has been done for you.
3. Sapna makes up a game using seven cards.

Here are the cards.
1

Josh picks a card without looking.

If Josh picks an odd number then Sapna scores a point.
If Josh picks an even number then Josh scores a point.
Is this a fair game?
Circle Yes or No.
Yes / No
Explain how you know.
$\qquad$
$\qquad$
$\qquad$
4. Here is a spinner which is a regular octagon.

Write 1, 2 or 3 in each section of the spinner so that
1 and 2 are equally likely to come up and 3 is the least likely to come up.

5. Here is a square spinner.

Look at these statements.
For each one put a tick $(\checkmark)$ if it is correct.
Put a cross ( $\mathbf{X}$ ) if it is not correct.
'4' is the most likely score.
'2' and '4' are equally likely scores.

Odd and even scores are equally likely.

A score of ' 3 ' or more is as likely as a score of less than ' 3 '. $\square$
6. Dan has a bag of seven counters numbered $\mathbf{1}$ to $\mathbf{7}$

Abeda has a bag of twenty counters numbered 1 to 20
Each chooses a counter from their own bag without looking.
For each statement, put a tick $(\checkmark)$ if it is true.
Put a cross $\left(\mathbf{K}_{\text {) if it is not true. }}\right.$

Dan is more likely than Abeda to choose a '5'

They are both equally likely to choose a number less than 3

Dan is more likely than Abeda to choose an odd number.

Abeda is less likely than Dan to choose a '10'

7. Here are two spinners, $A$ and $B$.

Each one is a regular hexagon.

A

B

For each statement, put a tick $\left(\mathbb{V}^{\text {}}\right.$ ) if it is true.
Put a cross $\left({ }^{\circ}\right.$ if it in not true.

Scoring ' 1 ' is more likely on $A$ than on $B$.

Scoring ' 2 ' is more likely on A than on B.

Scoring ' 3 ' is as equally likely on $A$ as on $B$.

Zara spins both spinners.
The score on A is added to the score on B .
She says,
'The sum of the scores on both spinners is certain to be less than 7 '.

Is she correct?
Circle Yes or No.

Explain how you know.
$\qquad$
$\qquad$
$\qquad$
8. The spinner is divided into nine equal sections.

Which two different numbers on the spinner are equally likely to come up?

1 mark

Meera says,
'2 has a greater than even chance of coming up'.
Explain why she is correct.
$\qquad$
$\qquad$
$\qquad$
9. Katie made two spinners, A and B.

spinner A

spinner B

She says,

## 'Scoring a 1 on spinner A is just as likely as scoring a 1 on spinner $B^{\prime}$.

Explain why Katie is correct.
$\qquad$
$\qquad$
$\qquad$
10. Here are two bags.

Each bag has $\mathbf{3}$ white balls and one black ball in it.

A ball is taken from one of the bags without looking.

What is the probability that it is a black ball?
Give your answer as a fraction.

All the balls from both bags are now mixed together in a new bag.

Put a cross ( $\boldsymbol{\sim}_{\text {) }}$ on this line to show the probability of taking a black ball from the new bag.

11. The outer ring of this spinner has $\mathbf{8}$ sections labelled with the numbers $\mathbf{1}$ to 5 . The inner ring has 12 equal sections on it.

Laura spins the pointer.
Which is the pointer most likely to stop on?

Give a reason for your answer.
 $\qquad$
$\qquad$
$\qquad$

What is the probability of getting an even number on this spinner?
Give your answer as a fraction.

1 mark
12. Samir spins a fair coin and records the results.

In the first four spins 'heads' comes up each time.

| 1 st <br> spin | 2nd <br> spin | 3rd <br> spin | 4th <br> spin |
| :---: | :---: | :---: | :---: |
| Head | Head | Head | Head |

Samir says,
'A head is more likely than a tail'.

Is he correct? Circle Yes or No.

Give a reason for your answer.
$\qquad$
13. Harry has six tins of soup.

The labels have fallen off.
Here are the labels and tins.

Harry chooses a tin.
What is the probability that it is a tin of Pea Soup?
Give your answer as a fraction.

1 mark

What is the probability that the tin he chooses is NOT a tin of Tomato Soup?
Give your answer as a fraction.

1 mark
14. A special dice has the numbers 1 to 6 on it. It is in the shape of a cuboid so that a 6 or a 1 is less likely to come up than a $2,3,4$ or 5 .

The probability of rolling a $\mathbf{6}$ is $\mathbf{0 . 1}$
The probability of rolling a $\mathbf{1}$ is $\mathbf{0 . 1}$
The numbers 2, 3, $\mathbf{4}$ or $\mathbf{5}$ each have an equal probability of coming up.

Calculate the probability of rolling a 5 with this dice.

15. Lee has two spinners.

What is the probability of spinning a $\mathbf{4}$ on spinner $\mathbf{A}$ ?
Write your answer as a fraction.

1 mark

On which spinner is he more likely to get a $\mathbf{1}$ ?

Give a reason for your answer.
$\qquad$
$\qquad$
$\qquad$

Lee says,
'I am equally likely to get a $\mathbf{2}$ on spinner $A$ as on spinner $B$ '.
Explain why he is correct.
............................................................................................................................
$\qquad$
$\qquad$
16. Megan spins the pointers on these two spinners.

She adds the numbers together to make a total.

Total 9

Here is a table to show all the possible totals.
Number on Spinner B

|  |  | 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|  | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| Number on Spinner A | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
|  | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
|  | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
|  | 6 | 7 | 8 | 9 | 10 | 11 | 12 |

Use the table to answer these questions.
What is the most likely total?

1 mark

What is the probability of getting a total of $\mathbf{1}$ ?

1 mark

The total 3 and the total 11 are equally likely.
Explain how the table shows this.
$\qquad$
$\qquad$
$\qquad$
17. Mel uses an 8-sided spinner.

Draw lines to show how likely the following are.

18. Seven number cards are in a bag.

Jill takes one card out and finds the total of the two numbers.
She then puts the card back in the bag.

This is a graph of Jill's results after doing this 100 times.

Give the reason why the 'total 7' never came up.
$\qquad$
$\qquad$

Give the reason why the 'total 6' came up most often.
$\qquad$
$\qquad$
