

1 hour 30 minutes.

#### INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page. You must answer the questions in the spaces provided.

**Do not write outside the box, around each page or on blank pages.** Complete in blue or black ink only. **Do not write with a gel pen.** Answer **all six** questions.

#### INFORMATION FOR CANDIDATES

The total mark for this paper is 90. Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

Quality of written communication will be assessed in Question 2(c)(ii).

(b) C	ne kind c	f earthouake	e wave is	called a	an L-wave.
-------	-----------	--------------	-----------	----------	------------

In L-waves the particles of the material vibrate perpendicular to the direction of propagation. A particular L-wave has a frequency of **0.002 Hz** and a wavelength of **2 500 000 m**.

 (i) Which one of the following statements about L-waves is true? Tick (✔) the appropriate box.

L-waves are transverse.	
L-waves are longitudinal.	
L-waves are neither transverse nor longitudinal.	

(ii) Explain what is meant by a wavelength of **2 500 000 m**.

(iii) Use the information above to calculate the speed of this L-wave. Give your answer in m/s.

You are advised to show clearly how you get your answer.

Speed =	m/s [4]

(c) Ultrasound can be used to measure the diameter of the head of a baby in the womb. The ultrasound is passed through the womb and the baby's head. The time for the ultrasound to travel from **B to A** is measured.

© Lorelyn Medina / Hemera / Thinkstock

- (i) What name is given to the reflection of a sound wave?
- (ii) It takes 0.00006 seconds for the ultrasound to travel from point B to point A. Ultrasound travels at a speed of 1500 m/s in a baby's head. Calculate the width of the baby's head. Give your answer in m.

You are advised to show clearly how you get your answer.

Width of baby's head = \_\_\_\_\_ m [4]

## 

\*24GPH2104\*

[1]

(iii)	Explain why it is better to use ultrasound rather than X-rays when monitoring
	the development of a baby in the womb.

(b) The diagram below shows a ray of light passing through a rectangular glass block.

- (i) What name is given to the bending of the light when it passes from air into glass?
- (ii) Using a ruler draw the normal at the point where the light enters the glass. Label the normal with the letter "N". [1]
- (iii) Mark clearly on the diagram the angle of incidence in air with the letter "i" and the angle of refraction in the glass with the letter "r". [1]
- (iv) What causes the light to change direction in the way shown in the diagram when it passes from air into glass?

(c) (i)	) State carefully what is meant by the focal length of a converging lens.		
		[1]	
		_ [']	

- (ii) Describe in detail how you would use a distant object to measure the focal length of a converging lens. In your description you must:
  - state the apparatus you use;
  - describe fully what you would do;
  - state what measurement(s) you must make to find the focal length;
  - state what you would do to ensure your measurement of the focal length is as accurate as possible.

In this question you will be assessed on your written communication skills including the use of specialist science terms.

3 (a) A student was given a resistance-meter, which measures resistance directly, and a length of nichrome resistance wire.
 She connected the circuit shown below and recorded the resistance of various lengths of the wire.

Her results are recorded in the table below.

Length of wire/m	0.00	0.25	0.50	0.75	1.00
Resistance/Ω	0.0	4.0	7.0	12.0	17.0

## 

\*24GPH2110\*

(ii) The relationship between the resistance R and length L of the wire is of the form

 $R = k \times L$ 

Explain how you could obtain the value of k from the graph.
