Unit 2

Higher Tier

[GPH22]

GPH22

FRIDAY 24 JUNE, MORNING

TIME

1 hour 45 minutes.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.

You must answer the questions in the spaces provided.

Do not write outside the box, around each page or on blank pages.

Complete in blue or black ink only. Do not write with a gel pen.

Answer all six questions.

INFORMATION FOR CANDIDATES

The total mark for this paper is 115.

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

Quality of written communication will be assessed in Questions 2(b)(ii) and 4(a).

1	(a)	One	e kind of earthquake wave is called an L-wave.
		pro	-waves the particles of the material vibrate perpendicular to the direction of pagation. A particular L-wave has a frequency of 0.002 Hz and a wavelength 500 km .
		(i)	Which one of the following statements, about L-waves, is true? Tick (✓) the appropriate box.
			L-waves are transverse.
			L-waves are longitudinal.
			L-waves are neither transverse nor longitudinal. [1]
		(ii)	Explain what is meant by a frequency of 0.002 Hz.
			[2]
		(iii)	Use the information above to calculate the speed of this L-wave. Give your answer in m/s.
			You are advised to show clearly how you get your answer.
			Speed = m/s [4]

(b) Ultrasound can be used to measure the diameter of the head of a baby in the womb. When ultrasound reaches the baby's head at A, some ultrasound is reflected back to the detector and produces pulse A on the CRO. Some ultrasound passes through the head to point B, and is reflected back to the detector. This reflection produces pulse B on the CRO.

(i)	What name is given to the reflection of a sound wave?	
-----	---	--

[1	1	ĺ
ь.		

The CRO is adjusted so that each horizontal division on the diagram above corresponds to a time of 40 microseconds.

(ii) How long is the time interval between the arrival of pulse A and the arrival of pulse B at the detector? Give your answer in microseconds.

You are advised to show clearly how you get your answer.

[Turn over

9869

Rewarding L

(iii) How long does it take for the ultrasound to travel from one side of the baby's head to the other? Give your answer in microseconds.You are advised to show clearly how you get your answer.	;
Time to travel from B to A microseconds [1]]
Ultrasound travels at a speed of 1500 m/s in a baby's head.	
(iv) Use your answer to part (iii) to calculate the width of the baby's head from A to B. Give your answer in cm. (1 microsecond = 1×10^{-6} s).	
You are advised to show clearly how you get your answer.	
Width of baby's head = cm [5]]

(ii)	Describe in detail how you would use a distant object to measure the focal length of a converging lens. In your description you must: • state the apparatus you use; • describe fully what you would do; • state what measurement(s) you must make to find the focal length; • state what you would do to ensure your measurement of the focal length is as accurate as possible. In this question you will be assessed on your written communication skills including the use of specialist science terms.
