## Multiplication of algebraic Terms and Expression

i) Multiplication of Sign

- $X-=+$
(Division of sign is same as multiplication, i.e., $-\div+=-$ )
- $X+=-$
$+X-=-$
$+X+=+$
If there is no sign in front there is " + "
ii) Multiplication of coefficient (number). If there is no coefficient there is 1 .
iii) Multiplication of bases: When same bases are multiplied then their power will be added. $\mathrm{a}^{3} \times \mathrm{a}^{2}=\mathrm{a}^{(3+2)}=\mathrm{a}^{5}$

Worked out example.
$-5 x^{2} y \times 3 x y z$
$-15 x^{3} y^{2} z$ (Write all the bases then adjust the power: $x^{(2+1)} y^{(1+1)} z^{1}$, Power 1 no need to write, if there is no power there is 1 )

1 ) Multiply the followings.
a) $2 x$ and $x^{2}$
b) $2 \times m \times n$
c) $p \times 3 \times q$
$=$ $\qquad$
$\qquad$
$=$ $\qquad$
d) $2 x$ and -3
e) $m^{4}$ and $m^{2}$
f) $2 x^{3}$ and $3 y^{2}$
$=$ $\qquad$ $=$ $\qquad$
$\qquad$
g) $5 x y z$ and $-3 x^{2} y^{3}$
h) 5 mn and 3 pq
i) $p^{2}$ and $-6 p^{2} q$
$=$ $\qquad$
j) 3 and 5 m
k) $12 a^{2} b$ and $-5 a b$

1) $-7 a^{2}$ and $3 b$
$\qquad$
$=$ $\qquad$
$\qquad$
2) Multiply and complete the table. Some examples are done for you.

| $X$ | $-5 x^{4}$ | $3 p^{2}$ | $x^{7}$ | $-13 x^{4}$ | $p$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $x$ |  |  |  |  |  |
| $-3 p$ |  | $-9 p^{3}$ |  |  |  |
| $7 x y$ |  |  |  |  |  |
| $3 p$ |  |  |  |  |  |
| -5 |  |  |  |  | $-5 p$ |
